

STABIFENCE COLOURS

StabiWood is a modern solution for fencing in New Zealand. Using aluminium posts and composite wood boards to create a stylish and stable fencing product. StabiWood fencing looks like natural wood but is UV resistant and made from recycled wood fibre and recycled plastic.

- Look and feel of natural timber fencing but with added benefits.
- Contains unique UV stabilisers which will not twist, warp or discolour.
- Does not require any upkeep such as oiling or painting to maintain.
- Anti-mould agents to help protect the fencing against rot and decay.
- Manufactured from 90% recycled waste.

STABIFENCE

FEATURES

NO OIL OR PAINTING REQUIRED

The unique characteristics of STABIWOOD eliminates any need for oiling or painting.

SAFE FOR KIDS

Traditional problems associated with natural timbers including warping and splinters, can present a safety hazard and threaten you and your family's health. The unique composite of STABIWOOD eliminates all timber-associated hazards in a completely safe and non-toxic way.

SUSTAINABLE BENEFITS

STABIWOOD is made up of recycled polymer and wood fibres from wood processing plants that are blended together to create a unique fencing solution.

UV AND MOISTURE PROTECTION

Traditional timber fencing can twist and splinter after just a few years without treatment. STABIWOOD delays the weathering process and is equipped with ANTI-UV technology to combat fading in sunlight. The polymer component gives excellent resistance to the elements, making it far more water resistant than natural timber. It has the ability to flex and prevents the boards from warping, splitting or tearing away.

HIDDEN FIXING SYSTEM

By using the unique aluminium posts, all fixings are hidden for a clean, stylish finish to your fence.

FIRE RESISTANT

STABIWOOD is less combustible than natural timber, but should not be exposed to direct flames.
